A simple example showing how to create Harvard style referencing in LaTeX

WriteLaTeX

Abstract

The following examples show how to produce Harvard style referencing using biblatex.

Citation examples

1. A citation command in parentheses: (**Smith:2012qr**).

2. A citation command for use in the flow of text: As **Smith:2013jd** said . . .

3. A citation command which (**diracx**) automatically switches style depending on location and the option setting in the package declaration (see line 12 in the LaTeX source code). In this case, it produces a citation in parentheses: (**Other:2014ab**).
